Water Transformed by *Intention*

BY DON ESTES

Scientific research has shown that a mathematical expression of something is more or less the same as that which is being modeled. Metaphors hold the same energy as what they represent. This principle, called *transcendence* in alchemy, explains how the purification and separation that a substance suffers in a crucible or alembic while practicing the art, applies to the artisan himself. In other words, the experience of the substance is a metaphor and witness for the experience that the practitioner is trying to achieve, and it holds that memory in its time record.

All substances carry with them a record of their prior experience. Such records have been found in core

samples of ice and rock, which have been used to determine the prevailing patterns of weather, tools being used and other cultural developments in vogue on specific dates in history. Rocks and ice can hold patterns in place because they are more or less static. However, liquid water is alive and very dynamic, constantly changing with its environment.

All substances carry with them a record of their prior experience.

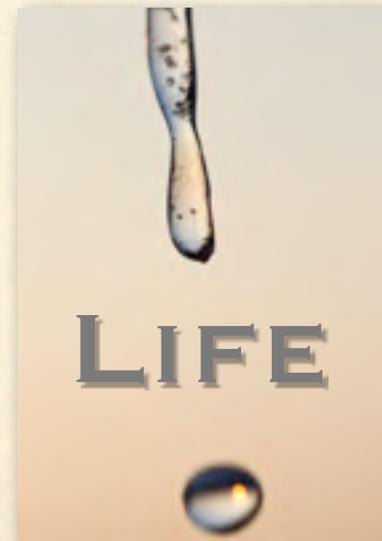

CHARGED

ALIVE

LIQUID WATER IS
ALIVE AND VERY
DYNAMIC,
CONSTANTLY
CHANGING WITH ITS
ENVIRONMENT.

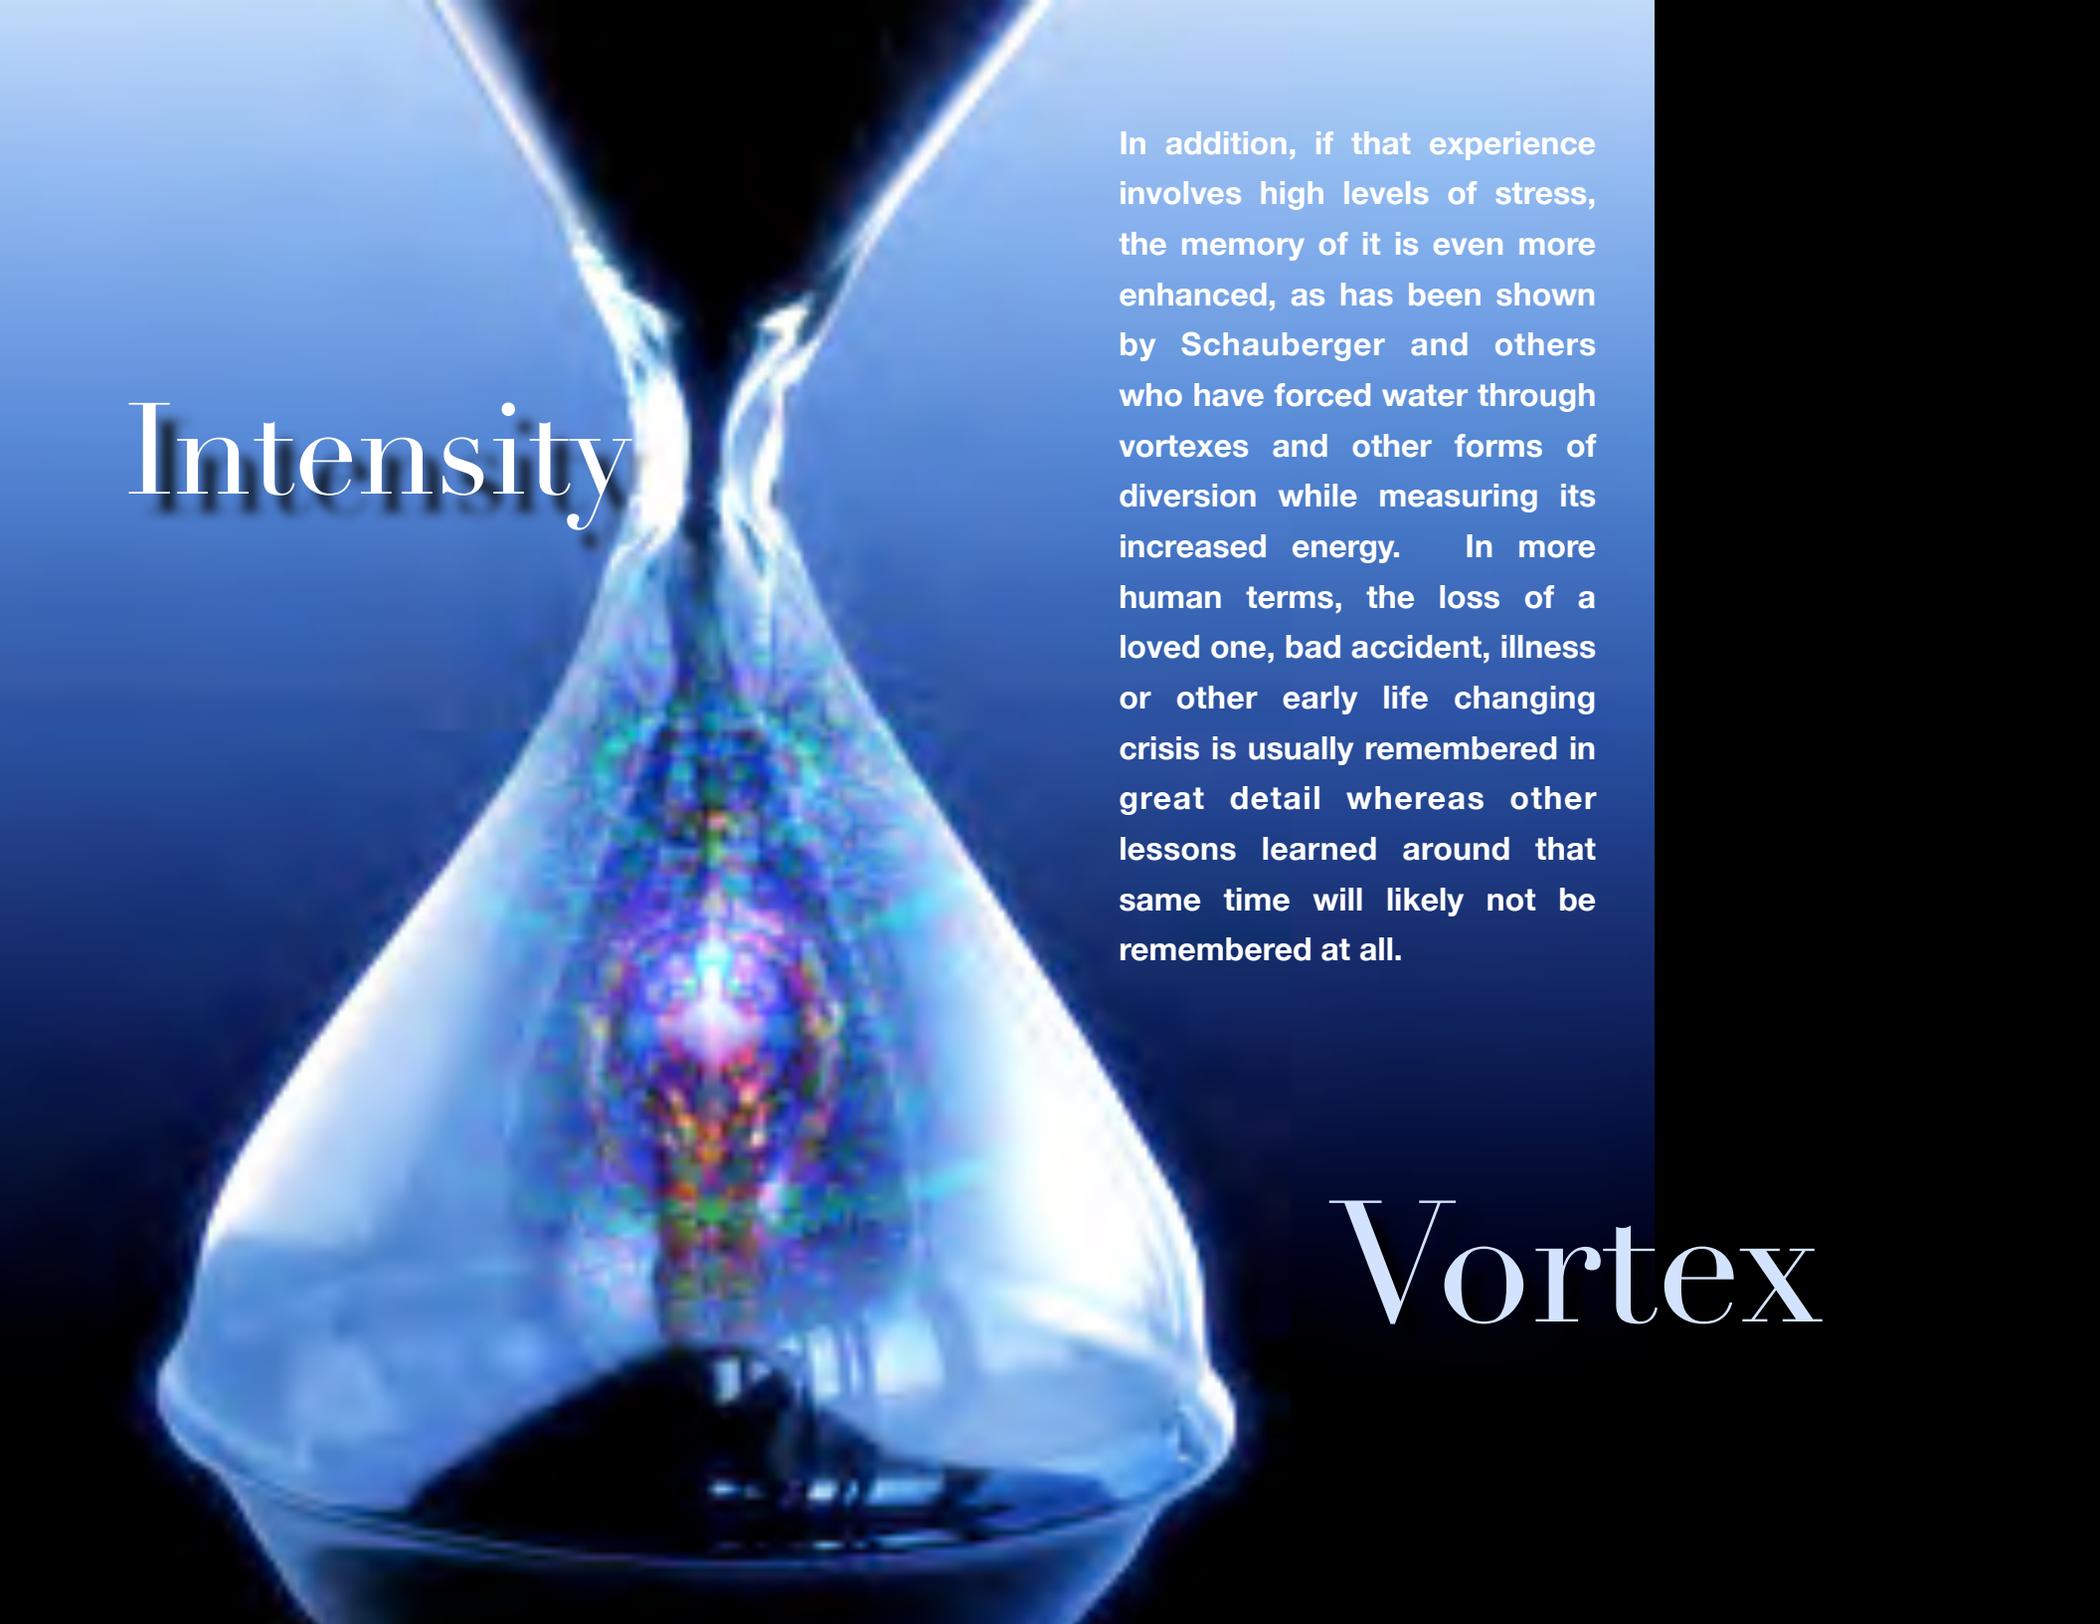

Being so adaptable to its immediate surroundings, it's nearly impossible to store information for long periods of time on water unless the information is learned from experience rather than from mere exposure.

It has long been known that water is the best storage material because it is the most resonant form of matter. Dr. Emoto and others have shown that it will take on the vibration of anything in close proximity. The time record of its experience is thought to be held and maintained within the structure of its bond angles. This concept of “structured” water has suddenly become the subject of great interest with new versions appearing on the market almost weekly. The major benefits of most of these relate to improved hydration. Water that has fewer contaminants, lower surface tension, smaller molecules, magnetic and electrical charge traverses the cell membrane much easier and can deliver nutrients and remove toxins

much better than normal tap water. However, that's only part of the story about the function and value of water.

The ability of water to deliver and remove contents from the cells is not as important as the record of the experience it is carrying. There is a difference between knowledge and know-how...**dynamic** experience versus **static** memory. Most techniques for putting information on water involve the latter, exposing the water to information being generated by crystals, coils, magnets, lasers, computers or some other outside source while leaving the water subject to distractions in its environment, like a child in school not paying attention while looking out the window and daydreaming.

It has long been known that water is the best storage material because it is the most resonant form of matter.

Intensity

In addition, if that experience involves high levels of stress, the memory of it is even more enhanced, as has been shown by Schauberger and others who have forced water through vortices and other forms of diversion while measuring its increased energy. In more human terms, the loss of a loved one, bad accident, illness or other early life changing crisis is usually remembered in great detail whereas other lessons learned around that same time will likely not be remembered at all.

Vortex

As it is on the outside, so it is on the inside. The water that makes up the great majority of you has the same propensities as yourself. If you hold a glass of water and say “love” to it, it will take on that energy¹. However, the moment you hand it over to someone else in a different mental or emotional state, it will immediately shift to their energy field.

The same thing happens when any outside source is put in close proximity to water it will take on that energy. However, if it is later exposed to another energy in closer proximity, it will sympathize, resonate and shift to the new source.

In order to solve this problem, we’ve created a unique new process of storing data and experience on water molecules. Instead of trying

to impart information onto the water from an exogenous source, we’ve designed a system by which water must become the agent of it’s own transformation by passing through, and surviving an experience that requires it to:

1. Acknowledge the need to change
2. Give up all resistance to the change
3. Remove any unwholesomeness blocking the change
4. Take faith and step out to the next highest level of order

This process is called **phase modulated quadrature transform** because it requires the water to be separated into its actual and potential phases, and a proprietary

algorithmic transform is utilized to do the separation. We’ve created a device that uses this process called the P.E.A.K. Alembic. P.E.A.K. stands for **P**ermeation of **E**nergies, **A**llasso and **K**tisis, each representing one of the three main bands of universal energy; power, transformation and disassembly ... correlating to physical, mental and spiritual. The Greek word Ktisis was used to imply spirituality, but its literal meaning is “the undoing”. These ancient peoples knew the truth that every person has the opportunity to take responsibility and grow, but failing to do so, results in a universal disassembly of the current actual situation in order to allow a potential new one to replace it.
